WPLeftBehind.com
WordPress Plugin

User Manual

Installing "WPLeftBehind".

Installing the plugin is like installing any other WP plugin.

Step 1: Go to the "Plugins" section and click.
Step 2: Click "Add New" and Upload the included zip file.
Step 3: Activate "WPLeftBehind".

After Installing The Plugin...

After installing the plugin, please go to its settings page first under your WordPress admin area (left sidebar).
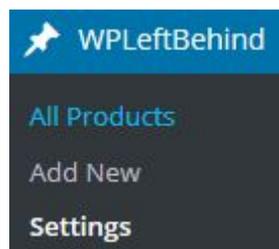

And add an alias for your 2 affiliate networks.

Finally, click "Update" to save your settings.

> **<mark>Highly Recommended:</mark>** It's highly recommended to adjust your settings **BEFORE** going live and then don't touch them anymore.

A Final Thing Before We Begin...

If you are using a "Cache" plugin (something very probable), please make sure that it allows pages with GET parameters (look for an option that allows you to <u>NOT</u> cache page requests that use GET parameters).

For example, if you are using WPSuperCache (a popular cache plugin), You have to enable this option:

☑ Don't cache pages with GET parameters. (?x=y at the end of a url)

Tip: If you are using WPSuperCache, you can configure its settings from your WP Admin Dashboard (Left Sidebar -> Settings - WPSuperCache).

Using WPLeftBehind

Using the plugin is really easy. To get started, click "Add New" to add a new product to the system...
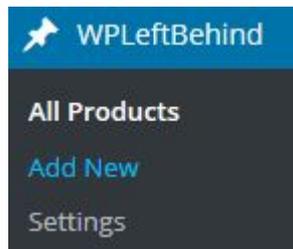

First, enter a Name For This Product...
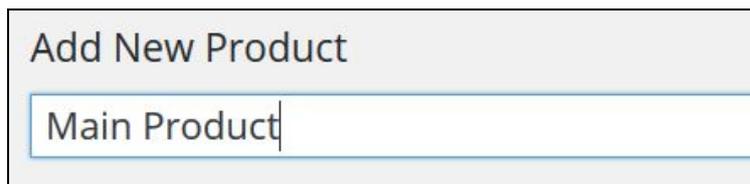

Example:

- Product XYZ
- Product XYZ OTO
- Product XYZ OTO Downsell

This name is for your reference only.
Then enter product sales page url (where you will be selling this product).

Then you have to enter the payment button code for your both payment processors.

You can do it for the Payment Processor #1...

...And for the Payment Processor #2.
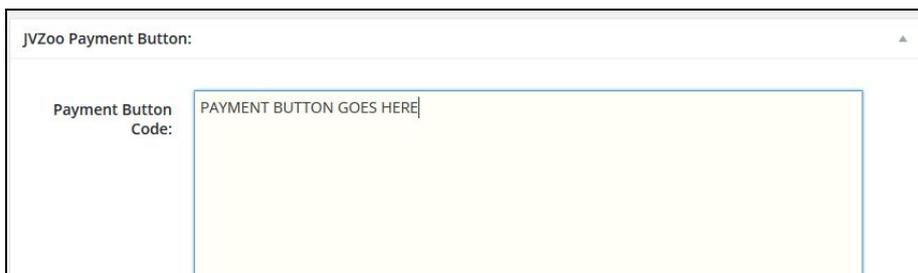

Then save your settings ("Publish" button)...
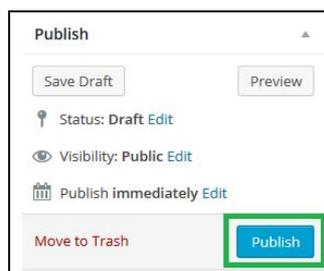

Working With Upsells / Downsells: *If your license allows multiple products, and you're setting up an Upsell or Downsell, please enter the url of the sales page that belongs to the Upsell / Downsell.*

If your affiliate platform gives you a "No Thanks" html code for an Upsell / Downsell, you have to place that code below the payment button code of your Upsell / Downsell.

Once You've Saved Your Product...

Once you've saved your product, click the **"Get Shortcode!"** button...

...and you will see a screen like this:

This screen gives you:

1) A shortcode to add to the sales page of the product that you're setting up. (Place it where you want to show the payment button).

2) A final sales page url that you have to add to your product settings (affiliate network #1) as your sales page url.

3) Another final sales page url that you have to add to your product settings (affiliate network #2) as your sales page url.

Comment: In the previous screenshot, you see the Network #1 referenced as WarriorPlus and the Network #2 referenced as JVZoo but please remember that you can use the plugin with any network of your choice ad set the alias for those networks from WPLeftBehind -> Settings.

"WPLeftBehind" Can Be Added To a Widget .

If your theme supports widgets, you can add WPLeftBehind to it through a widget.

You'll find the "WPLeftBehind" widget here...
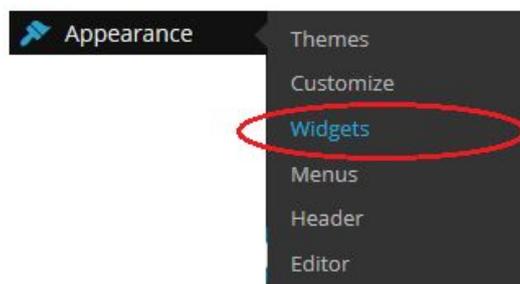

Locate the widget and paste a WPLeftBehind shortcode , inside of it.

Save it and you can now add the widget to your theme.

Some Final Comments

1. You can work with any affiliate of your choice (the plugin itself doesn't restrict the networks that your work with).

2. Important: Use an alias for each one of your networks. This will help you to keep organized when creating products and it's HIGHLY recommended. Not using an alias can bring you confusion and problems.

3. If a visitor is referred by an affiliate, that affiliate platform will be used for all your products.

4. If a visitor has not been referred by an affiliate, the system will show the payment button that belongs to your main affiliate network (Network #1).

5. If a visitor is a repeat visitor the same payment processor will be used.

6. We adopt a "last platform wins" system. This means that if a visitor has been referred by a network like "ClickBank" and then (this same visitor) arrives to the site again referred by a "JVZoo" affiliate, the "JVZoo" payment button (last visitor) will be showed.

7. If your license allows multiple products, you can use the plugin to setup upsells / downsells. If so, try to use meaningful names that will help you to stay organized.
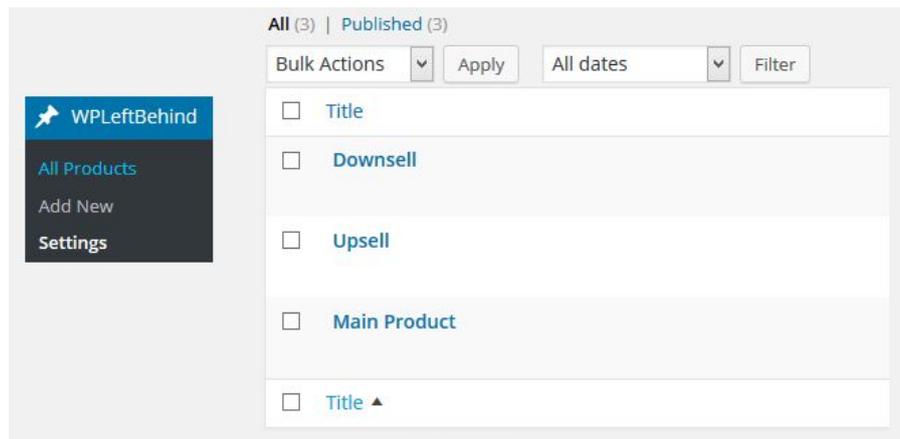

Always Test Everything Before Going Live!!!!

That's All!
